

1. Problem : Inner Tie Rod Noise

2. Results

1) Steering Gear Assembly

- Appearance/Dimension/Leakage/Lash Test & Torque Test(I.T.R & O.T.R) : No issue

Model	Check Appearance	Check Result
T250		OK
J200		OK

3. Possible Root Cause

→ For inner tie rod and outer tie rod noise, ball stud of outer tie rod and up/down movement of knuckle occur while driving on uneven road surfaces, and due to friction. The same phenomenon occurred in other vehicle, it was confirmed as the same content.
